

# Excellence in Review 2024

**T**HE success of the JOE relies on many volunteers who generously contribute their time and expertise toward the editorial process of the journal. Each year, we take this opportunity to thank our volunteers and to recognize individuals whose review work in 2024 was considered to be exceptional by members of our editorial board.

An excellent review evaluates the technical merit of the submitted manuscripts, describes the significance of the contribution to the field of oceanic engineering, and states why the

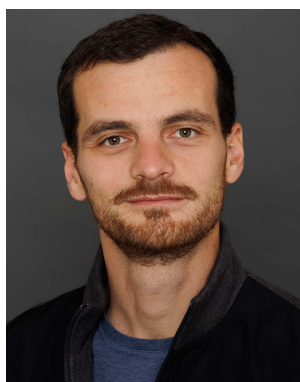

work should or should not be published. It provides constructive feedback that guides authors in refining their manuscript and advancing their research work.

Please join us in honoring the outstanding reviewers of 2024, pictured below. A photograph for an additional honoree, Michael Jakuba, was not available.
